Appendix F - Zebra Mussel Monitoring Report

**DEEP CREEK HYDROELECTRIC STATION
MDNR WATER APPROPRIATION PERMIT NO. GA92S009 (01)
ANNUAL REPORT PER PERMIT CONDITION NO. 23**

1.0 SUMMARY

The Pennsylvania Electric Company (Permittee) holds Water Appropriation Permit GA92S009(01) issued by the Maryland Department of Natural Resources (MDNR) and now administered by the Maryland Department of the Environment (Department). This report is submitted in accordance with Permit Condition 23, which requires the Permittee to submit an annual report to the Department, including data and information as specified in Permit Conditions 15-19 and 21.

1.1 Lake Level Monitoring

Permit Condition 15 requires the Permittee to report the results of water-level monitoring at Deep Creek Lake. Appendix A contains daily water-level data and a plot depicting lake levels for 1996.

1.2 Temperature Monitoring

Permit Condition 16 requires the Permittee to report the results of temperature monitoring. A "Water Temperature Enhancement Plan" was approved by the Department by letter dated June 8, 1996. In accordance with the Plan, the Permittee monitored river water temperature at the Sang Run Bridge and made temperature enhancement releases on 8 days in 1996. The Permittee provided Mr. S. P. Schreiner of Versar ESM, Inc., consultant to the MDNR, temperature monitoring data by letter dated November 6, 1996 and temperature enhancement summary data by letter dated December 16, 1996. Copies of these letters are included in Appendix

B. Also included in Appendix B are daily maximum water temperatures for 1996 as monitored by the Permittee and Versar and compiled by Versar.

1.3 Minimum Flow Release Monitoring

Permit Condition 17 requires the Permittee to report flow measurements and the occurrence of bypass releases. In 1996, the Permittee did not operate the flow bypass except for test purposes. Natural river flows in the Youghiogheny River did not trigger bypass releases from Deep Creek Station. A record of the river flows at the Oakland gaging station provided by the U.S. Geological Survey is presented in Appendix C.

1.4 Dissolved Oxygen (DO) Monitoring

Permit Condition 18 requires the Permittee to report the results of dissolved oxygen monitoring. The weir was operated and tested in 1996, in accordance with the "Dissolved Oxygen (DO) Enhancement Operations and Monitoring Protocol" approved by the Department on January 6, 1995. Appendix D is the record of data obtained from monitoring DO and testing the weir in 1996.

The lowest DO measured in the tailrace downstream of the weir during generation (startup excluded) was 4.9 mg/l, on August 30. On the that day, DO in the tailrace prior to generation was 3.18 mg/l. The lowest winter DO measured in the tailrace downstream of the weir during generation (excluding startup) was 9.66 mg/l, on February 16.

In accordance with the protocol, all 17 DO startup tests were performed during the summer months. The maximum DO improvement measured during the tests was

2.11 mg/l. DO improvement ranged from +2.11 to -0.53 mg/l. DO variation generally showed a positive correlation with temperature variation. Temperature and DO tended to decrease after the initial startup of generation. Gradually, both the temperature and the DO increased, eventually exceeding the values at the start of the test period

1.5 Releases Unsuitable For Whitewater Recreation

Permit Condition 19 requires Permittee to document the "times and dates when generation releases not suitable for whitewater recreation occurred." Such times and dates are presented in Appendix E. Appendix E also presents information on releases made on Fridays, Mondays and designated Saturdays, as required by Condition 19, and special releases made at the request of the whitewater boaters. The Permittee continued to announce scheduled and temperature enhancement releases in advance on a telephone recording.

1.6 Zebra Mussel Monitoring

Permit Condition 21 requires the Permittee to submit the results of its zebra mussel monitoring program. Appendix F is a memorandum report presenting the results of zebra mussel monitoring at Deep Creek Lake. Artificial substrates placed at the station intake area have shown no signs of the zebra mussel to date.

APPENDIX A

LAKE LEVEL DATA AND PLOT

Deep Creek Lake Level 1996

Month	Day	Lake Level	Rain Fall	Month	Day	Lake Level	Rain Fall	Month	Day	Lake Level	Rain Fall

APPENDIX B

TEMPERATURE MONITORING AND RELEASE REPORTS

MAXIMUM DAILY RIVER WATER TEMPERATURES

Daily maximum river water temperatures in the Youghiogheny River at Sang Run are presented on the following table. The data were collated and provided by Versar, Inc., consultant to the MDNR Power Plant Assessment Division (PPAD).

The column labeled "SMAX" lists the arithmetic means of the daily maximum water temperatures, in degrees C, measured by two "Tempmentors" placed in the river by the MDNR. The column labeled "PenMAX" lists the maximum water temperatures, in degrees C, measured by the Permittee's temperature monitor at the Sang Run Bridge. PPAD and Versar analyze the data to evaluate the Water Temperature Enhancement Plan used by the Permittee to determine the need and timing of daily temperature releases.

Subject: Deep Creek Data

Dear Steve:

In response to your telephone request of several days ago,
please find enclosed herewith:

(1) A printout of the Deep Creek Station operating log for
April 15-October 15 (whitewater boating season); and

(2) Diskettes ("JUN96.DAT", "JUL96.DAT" and "AUG96.DAT") of
the temperature data (recorded every two minutes) downloaded
from the temperature monitor at the Sang Run bridge for
June 1-August 31.

You also requested a copy of the tape recorded messages
announcing operating times; unfortunately, no log is kept of the
tape recordings.

If you have any question about this information, please call
me.

Very truly yours,

A handwritten signature in black ink, appearing to read "J. C. Phillips".

Subject: Deep Creek Data

Dear Steve:

In response to your recent telephone request, please find enclosed printouts of the temperature enhancement release software program screen for the eight days in 1996 on which temperature enhancement releases were made. On six of the eight days, the temperature enhancement releases were made in strict accordance with the Water Temperature Enhancement Protocol (WTEP). The two exceptions were:

- July 7 - the operators were unable to access the spreadsheet beginning some time after 0900 hrs. and made a release 1200-1400 hrs.; application of the Contingency Protocol would have resulted in a release 1100-1300 hrs.
- July 13 - a release was made 1100-1300 hrs.; the WTEP would have required only a one-hour release (not later than 1230 hrs.).

If you have any question about this information, please call me.

Very truly yours,

J. C. Phillips

Enclosure

APPENDIX D

RECORD OF

DISSOLVED OXYGEN MONITORING

TESTS of DISSOLVED OXYGEN DURING STARTUP

Summary of Results

Seventeen startup dissolved oxygen (DO) tests were performed in 1996, all with two unit operation. Results are summarized in Table D-1. The measured DO values at the start of the 17 tests ranged from 7.44 to 4.41 mg/l. The change in DO over the 15 minute test periods ranged from -0.53 to +2.11 mg/l, averaging approximately +0.58 mg/l. All but one of the 17 tests showed a net increase in DO at the end of the 15 minute test period. Although not evident from Table D-1, DO variation generally showed a positive correlation with temperature variation. Temperature and DO tended to decrease after the initial startup of generation. Gradually, both the temperature and the DO increased, eventually exceeding the values at the start of the test period.

Complete DO monitoring data for 1996 are attached.

APPENDIX E

**REPORT ON RELEASES UNSUITABLE FOR
WHITEWATER RECREATION**

Appendix E

REPORT OF RELEASES UNSUITABLE FOR WHITEWATER RECREATION

Permit Condition 19 provides "When lake levels are between the upper and lower rule bands, no releases shall be made between the 1600 hours and 0800 hours of the following morning, unless the release also provides three consecutive hours of flows suitable for whitewater boating during the hours between 0800 hours and 1600 hours. The times and dates when generation releases not suitable for whitewater recreation occurred shall be documented in an annual report."

This Appendix documents the occurrence of all releases during the whitewater boating season that could be considered unsuitable for whitewater boating for one or more of the following reasons:

- The release was not announced in advance on the Permittee's regular telephone recording,
- The release was not at least three hours in length, or
- The release did not occur within the hours of 1000 - 1500 hours (May, September and October) or 1000 - 1600 hours (June, July and August).

The whitewater boating season is defined in Condition 19 as the period from April 15 through October 15. Information in this section is limited to this time period.

1996 Scheduled Whitewater Releases

The lake level stayed at or near the Upper Rule Band for most of the 1996 whitewater boating season, occasionally exceeding the Upper Rule Band in all months. Scheduled water release commitments for whitewater boating were met with few exceptions. All releases were by two unit generation unless otherwise noted.

- **Mondays:** Condition 19 provides for releases between 1000 and 1300 hours on each Monday when the lake level is above the Lower Rule Band. All 1996 scheduled Monday releases were made with the exception of May 6, September 9 and 16 and October 7. However, high natural river flows on or proximal to May 6 (1900 cfs), September 9 (970 cfs, 1340 on September 8) and September 16 (351 cfs, 1510 on September 17) exceeded the criteria in Condition 19 requiring a reduction in generation. Releases were made from 1100 to 1400 hours instead of 1000 to 1300 hours on May 13.
- **Fridays:** Condition 19 provides for releases between 1000 and 1300 hours on each Friday when the lake level is above an elevation that is one foot below the Lower Rule Band. Scheduled 1996 Friday releases were made with the exception of May 3 and October 11. Only one unit generated on April 19 and September 20 at the request of the whitewater boaters. Generation was temporarily canceled on Friday, May 17 and 31 also at the request of the boaters. Releases began at 0700 hours on August 2 but were terminated at

Appendix E

- 1100 hours due to high river conditions. Releases resumed at 1400 hours. On June 21, releases were made from 1100 - 1300 hours.
- Designated Saturdays: Scheduled Saturday releases were made on May 4, May 25 from 1000 - 1400 hours, June 1, July 6, July 20, August 3, and August 31. One unit generated from 0900 - 1200 hours on May 4 at the request of the whitewater boaters.
- Special Releases: A three hour special release was made on Thursday, July 4 for the holiday weekend boaters. A four hour release was scheduled for Wednesday, July 31 for the Slots o' Luck Race but actual releases ran from 0730 - 2359 hours due to high river conditions. A six hour special release was made on Thursday, August 29 for the Upper Yough Race. Additional special releases were made from Tuesday, October 1 through Thursday, October 3 to provide whitewater boating recreation for the entire week following the Gauley Festival.

Releases Unusable by Whitewater Boaters

Tables 1 and 2 list all substantial releases from the Deep Creek Lake other than releases scheduled for the whitewater boaters. These releases include water discharged on days other than days scheduled with the boaters and water discharged on scheduled days but outside the time period scheduled with the whitewater boaters. Most of the releases listed on Tables 1 and 2 were announced on the telephone recording maintained by the Permittee and, therefore, were available for boating. However, since the Permittee does not track messages made on the recording, these announced releases are included on the tables. None of the releases listed on Tables 1 or 2 jeopardized releases previously scheduled for the whitewater boaters.

Table 1
Releases made on days with no scheduled whitewater boating releases

ZEBRA MUSSEL MONITORING REPORT

Memorandum

Subject: GPU ZEBRA MUSSEL MONITORING **Date:** January 21, 1997
PROGRAM - DEEP CREEK
HYDROELECTRIC STATION

From: R. L. Grove - Sr. Chemist, E&CS **Location:** Reading
E740-97-0003

To: T. R. Teitt - Water Resources, GENCO

This memo on the results of GPU's Zebra Mussel Monitoring Program at the Deep Creek Hydroelectric Station in 1996 is provided in accordance with Permit Condition 21 with the State of Maryland Department of Natural Resources.

GPU Nuclear Environmental & Chemistry Services (GPUN E&CS) began a Zebra Mussel Monitoring Program at Deep Creek in 1992. A star substrate has been placed at the Station intake area in Deep Creek Lake which is checked monthly (June through October) by Station personnel for the presence and/or attachment of zebra mussels. Water temperatures are recorded monthly for the substrate location as well as at the Station tailrace location. Attached are copies of the monthly "Field Collection Sheets" for the Zebra Mussel Monitoring Program as supplied by Station personnel for 1996.

GPUN E&CS conducted monthly zebra mussel veliger sampling via plankton net/microscopic identification from June through October 1996 at the Deep Creek Hydroelectric Station. Field observations have indicated no presence of zebra mussels at Deep Creek Lake.

Zebra mussels have been confirmed in western Pennsylvania in the Allegheny, Monongahela and Ohio Rivers, therefore the spread of the mussels into other fresh waters of Pennsylvania and Maryland appears inevitable. Projected activities for 1997 include monthly zebra mussel veliger sampling via plankton net/microscopic identification from June through October 1997 at the Deep Creek Hydroelectric Station. The substrate will continue to be monitored by Station personnel. Water samples will be collected and monitored for calcium as an indicator of zebra mussel colonization potential. During 1997 GPUN E&CS will develop an action plan for the Deep Creek Hydroelectric Station. This includes a review of the operational water uses at the facility and mitigation strategies for the control of zebra mussels at the Station.

Should you have any questions concerning the GPU Zebra Mussel Monitoring Program, please contact me at (610) 375-5046.

A handwritten signature in black ink that reads "R. L. Grove".

GPU ZEBRA MUSSEL PROGRAM
Field Collection

Facility Name: Deep Creek

Date: 7/16/96

Sampled by: Tom Grove

Time: 1100

SAMPLE DATA

Sampler Tag ID	Sampler Type	# Mussels Present	Comments
DC-1.	3	0	<u>Veliger Sampling</u>

Sampler Type: 1 = Biobox, 2 = Plate sampler, 3 = Star sampler, 4 = Other

WATER QUALITY DATA

Station Tag ID	Temp.	Diss. Oxygen	pH	Other

Send completed sheet interoffice:

GPU ZEBRA MUSSEL PROGRAM

Field Collection

Facility Name: DEEP CREEK DAMDate: 08/02/96Sampled by: C. A. RosemberryTime: 9⁰⁰ AM

SAMPLE DATA

Sampler Tag ID	Sampler Type	# Mussels Present	Comments
DC-1	Star	None	1. LAKE Elevation - 2460.5
			2. Ambient Temp. 60°F
			3. Lake Surface Water Temp. 73°F
			4. Water Temp. at Sampler Eleu. 71°F
			5. Lake calm - clear sky
			6. Condition of star sampler, had a light coating of mud, clean up and put back in

Sampler Type: 1 = Biobox, 2 = Plate sampler, 3 = Star sampler, 4 = Other

WATER QUALITY DATA

Station Tag ID	Temp.	Diss. Oxygen	pH	Other

GPU ZEBRA MUSSEL PROGRAM
Field Collection

Facility Name: Deep Creek Dam

Date: September 3, 1996

Sampled by: Charles A. Rosenberry

Time: 10³⁰ AM

SAMPLE DATA

Sampler Tag ID	Sampler Type	# Mussels Present	Comments
DC-1	Star	None	1. Lake elevation - 2458.9
			2. Ambient Temp. - 76°F
			3. Lake Surface Water Temp. - 77°F
			4. Water temp. at sampler elev. - 77°F
			5. Lake - Calm and sunny
			6. Condition of star sampler - had a light coating of mud, clean up and reinstall.

Sampler Type: 1 = Biobox, 2 = Plate sampler, 3 = Star sampler, 4 = Other

WATER QUALITY DATA

Station Tag ID	Temp.	Diss. Oxygen	pH	Other

GPU ZEBRA MUSSEL PROGRAM
Field Collection

Facility Name: Deep Creek Dam

Date: 10/01/96

Sampled by: Charles A. Rosenberry

Time: 12³⁰ Noon

SAMPLE DATA

Sampler Tag ID	Sampler Type	# Mussels Present	Comments
DC-1	Star	None	1. Lake elev. 2458.6
			2. Ambient Temp. 68°F
			3. Lake surface Water Temp. 68°F
			4. Water temp. at Sampler elev. 68°F
			5. Lake - small wave action, windy + sunny
			6. Condition of Star Sampler - had a light coating of mud, cleanup and reinstall.

Sampler Type: 1 = Biobox, 2 = Plate sampler, 3 = Star sampler, 4 = Other

WATER QUALITY DATA

Station Tag ID	Temp.	Diss. Oxygen	pH	Other
