## FOREWORD

The National Eutrophication Survey was initiated in 1972 in response to an Administration commitment to investigate the nationwide threat of accelerated eutrophication to freshwater lakes and reservoirs.

### OBJECTIVES

The Survey was designed to develop, in conjunction with state environmental agencies, information on nutrient sources, concentrations, and impact on selected freshwater lakes as a basis for formulating comprehensive and coordinated national, regional, and state management practices relating to point source discharge reduction and nonpoint source pollution abatement in lake watersheds.

### ANALYTIC APPROACH

The mathematical and statistical procedures selected for the Survey's eutrophication analysis are based on related concepts that:

- a. A generalized representation or model relating sources, concentrations, and impacts can be constructed.
- b. By applying measurements of relevant parameters associated with lake degradation, the generalized model can be transformed into an operational representation of a lake, its drainage basin, and related nutrients.
- c. With such a transformation, an assessment of the potential for eutrophication control can be made.

### LAKE ANALYSIS

In this report, the first stage of evaluation of lake and watershed data collected from the study lake and its drainage basin is documented. The report is formatted to provide state environmental agencies with specific information for basin

planning [§ 303(e)], water quality criteria/standards review [§ 303(c)], clean lakes [§ 314(a,b)], and water quality monitoring [§ 106 and § 305(b)] activities mandated by the Federal Water Pollution Control Act Amendments of 1972.

Beyond the single lake analysis, broader based correlations between nutrient concentrations (and loading) and trophic condition are being made to advance the rationale and data base for refinement of nutrient water quality criteria for the Nation's freshwater lakes. Likewise, multivariate evaluations for the relationships between land use, nutrient export, and trophic condition, by lake class or use, are being developed to assist in the formulation of planning guidelines and policies by EPA and to augment plans implementation by the states.

#### ACKNOWLEDGMENTS

The staff of the National Eutrophication Survey (Office of Research and Development, U.S. Environmental Protection Agency) expresses sincere appreciation to the Maryland Department of Natural Resources and the Maryland Department of Health and Mental Hygiene for professional involvement and to the Maryland National Guard for conducting the tributary sampling phase of the Survey.

Paul W. Slunt, Chief, Water Quality Services, James T. Allison, Natural Resources Manager, Water Quality Services, of the Maryland Department of Natural Resources, and Earl S. Quance, Chief, Division of Water and Sewerage, Maryland Department of Health and Mental Hygiene provided invaluable lake documentation and counsel during the course of the Survey.

Major General Edwin Warfield III, the Adjutant General of Maryland, and Project Officer Colonel Bernard Feingold, who directed the volunteer efforts of the Maryland National Guardsmen, are also gratefully acknowledged for their assistance to the Survey.

V

DEEP CREEK LAKE

STORET NO. 2402

I. CONCLUSIONS

A. Trophic Condition\*:

Deep Creek Lake is characterized as mesotrophic on the basis of survey data. Nutrient concentrations and potential for primary productivity as measured by algal assay control yield were low, while Secchi disc transparency was high. No algal blooms or aquatic weeds were noted by survey limnologists, and chlorophyll a levels were moderately low. However, oxygen depletion occurred below 9.7 meters during summer and fall, and bottom hydrogen sulfide formation was reported at station 2 during October sampling.

B. Rate-Limiting Nutrient:

Algal assay results indicate that Deep Creek Lake was limited by available phosphorus levels. Spikes with phosphorus, and nitrogen and phosphorus simultaneously result in increases in assay yield. Additions of nitrogen alone did not stimulate a growth response. The ratio of available nitrogen to phosphorus in sampled waters substantiates phosphorus limitation.

\* See Appendix E

C. Nutrient Controllability:

1. Point Sources - During the sampling year, the mean annual phosphorus load impacting Deep Creek Lake was less than the "permissible" (oligotrophic) rate proposed by Vollenweider (in press) for a lake of such volume and detention time. Shoreline septic tanks, estimated to account for 9% of the total phosphorus load, are the only known discharges reaching the lake. Future point sources should be carefully evaluated in order to maintain the existing high quality of Deep Creek Lake.
2. Nonpoint Sources - The mean annual phosphorus load from nonpoint sources was about 91% of the total reaching the lake. Measured tributaries accounted for 24.0% of the total phosphorus load and ungaaged tributaries accounted for 57.3%

## II. LAKE AND DRAINAGE BASIN CHARACTERISTICS

Lake and drainage basin characteristics are itemized below. Lake morphometry was provided by the State of Maryland; tributary data were provided by the Maryland District Office of the U.S. Geological Survey (USGS) (outlet drainage area includes the lake surface area). Mean hydraulic retention time was obtained by dividing the lake volume by mean flow of the outlet.

All outflow from this reservoir is diverted through a tunnel to the power generators of the Pennsylvania Electric Company [site F(1)]. This outflow was combined with estimated seepage from Deep Creek Dam to determine total outflow.

Precipitation values are estimated by methods as outlined in National Eutrophication Survey (NES) Working Paper No. 175. A table of metric/English conversions is included as Appendix D.

### A. Lake Morphometry:

1. Surface area: 15.78 km<sup>2</sup>.
2. Mean depth: 8.1 meters.
3. Maximum depth: 21.9 meters.
4. Volume:  $127.842 \times 10^6$  m<sup>3</sup>.
5. Mean hydraulic retention time: 1.1 years.

B. Tributary and Outlet:  
 (See Appendix A for flow data)

1. Tributaries -

<u>Name</u>	<u>Drainage area(km<sup>2</sup>)</u>	<u>Mean flow (m<sup>3</sup>/sec)</u>
B(1) Cherry Creek	32.1	0.49
C(1) Meadow Mountain Run	7.8	0.19
D(1) North Glade Run	10.3	0.13
E(1) Pawn Run	5.6	0.16
Minor tributaries & immediate drainage -	<u>95.8</u>	<u>2.58</u>
Totals	151.6	3.55

2. Outlet - F(1) Outlet Aqueduct 167.6 3.55

C. Precipitation:

1. Year of sampling: 129.9 centimeters.
2. Mean annual: 121.4 centimeters.

### III. LAKE WATER QUALITY SUMMARY

Deep Creek Lake was sampled three times during the open-water season of 1973 by means of a pontoon-equipped Huey helicopter. Each time, samples for physical and chemical parameters were collected from four stations on the lake and from a number of depths at each station (see map, page v). During each visit, depth-integrated samples were collected from each station for chlorophyll a analysis and phytoplankton identification and enumeration. During the first visit, 18.9-liter depth-integrated samples were composited for algal assays. Maximum depths sampled were 19.5 meters at station 1, 17.1 meters at station 2, 12.2 meters at station 3, and 11.0 meters at station 4. For a more detailed explanation of NES methods, see NES Working Paper No. 175.

The results obtained are presented in full in Appendix B and are summarized in III A for waters at the surface and at the maximum depth for each site. Results of the phytoplankton counts and chlorophyll a determinations are included in III B. Results of the limiting nutrient study are presented in III C.

B. Biological Characteristics:

1. Phytoplankton -

<u>Sampling Date</u>	<u>Dominant Genera</u>	<u>Algal Units per ml</u>
04/21/73	1. Flagellates 2. Dinobryon 3. Asterionella 4. Cryptomonas 5. Ankistrodesmus	334 167 128 128 69
	Other genera	<u>107</u>
	Total	933
07/23/73	1. Chrysocapsa 2. Dinobryon 3. Flagellates 4. Stephanodiscus 5. Melosira	686 591 528 169 137
	Other genera	<u>370</u>
	Total	2,481
10/04/73	1. Tabellaria 2. Dinobryon 3. Flagellates 4. Melosira 5. Synura	821 692 315 231 147
	Other genera	<u>203</u>
	Total	2,409

2. Chlorophyll a -

<u>Sampling Date</u>	<u>Station Number</u>	<u>Chlorophyll a (micrograms/Titer)</u>
04/21/73	1	5.0
	2	4.3
	3	4.7
	4	7.0
07/28/73	1	4.7
	2	8.9
	3	8.4
	4	9.5
10/04/73	1	5.6
	2	3.0
	3	5.8
	4	6.9

C. Limiting Nutrient Study:

1. Autoclaved, filtered, and nutrient spiked -

<u>Spike(mg/l)</u>	<u>Ortho P Conc.(mg/l)</u>	<u>Inorganic N Conc.(mg/l)</u>	<u>Maximum Yield (mg/l-dry wt.)</u>
Control	0.008	0.482	0.2
0.05 P	0.058	0.482	7.2
0.05 P + 1.0 N	0.058	1.482	13.4
1.00 N	0.008	1.482	0.1

2. Discussion -

The control yield of the assay alga, Selenastrum capricornutum, indicates that the potential for primary production in Deep Creek Lake was low at the time of sampling. The increase in yield with the addition of 0.05 mg/l phosphorus indicates phosphorus limitation. Spikes of nitrogen alone produced no positive growth response. Maximum growth potential was achieved with the simultaneous addition of both phosphorus and nitrogen.

The ratio of inorganic nitrogen to dissolved phosphorus was about 64:1 in the field samples for Deep Creek Lake, indicating the lake was phosphorus limited at the time of assay sample collection.

IV. NUTRIENT LOADINGS  
(See Appendix C for data)

For the determination of nutrient loadings, the Maryland National Guard collected monthly near-surface grab samples from each of the tributary sites indicated on the map (page v), except for the high runoff months of February and March when two samples were collected. Sampling was begun in May 1973, and was completed in May 1974.

Through an interagency agreement, stream flow estimates for the year of sampling and a "normalized" or average year were provided by the Maryland District Office of the USGS for the tributary sites nearest the lake.

In this report, nutrient loads for sampled tributaries were calculated from mean annual concentrations and mean annual flows.

Nutrient loadings for unsampled "minor tributaries and immediate drainage" ("ZZ" of USGS) were estimated by using the mean annual concentrations in Cherry Creek Meadow, Mountain Run and North Glade Run at stations B(1), C(1), and D(1) and mean annual ZZ flow.

## A. Annual Total Phosphorus Loading - Average Year:

## 1. Inputs -

<u>Source</u>	<u>kg P/yr</u>	<u>% of total</u>
a. Tributaries (nonpoint load) -		
B(1) Cherry Creek	205	7.2
C(1) Meadow Mountain Run	90	3.2
D(1) North Glade Run	130	4.6
E(1) Pawn Run	255	9.0
b. Minor tributaries & immediate drainage (nonpoint load) -	1,625	57.3
c. Known municipal STP's -	None	
d. Septic tanks* -	255	9.0
e. Known industrial -	None	
f. Direct precipitation** -	<u>275</u>	<u>9.7</u>
Total	2,835	100.0
2. Outputs - Outlet Aqueduct	890	
3. Net annual P accumulation - 1,945 kg.		

\*Estimate based on 900 lakeside residences.

\*\*Estimated (see NES Working Paper No. 175).

## B. Annual Total Nitrogen Loading - Average Year:

## 1. Inputs -

<u>Source</u>	<u>kg N/yr</u>	<u>% of total</u>
a. Tributaries (nonpoint load) -		
B(1) Cherry Creek	9,285	7.0
C(1) Meadow Mountain Run	4,715	3.5
D(1) North Glade Run	6,205	4.7
E(1) Pawn Run	10,665	8.0
b. Minor tributaries & immediate drainage (nonpoint load) -	75,635	56.8
c. Known municipal STP's -	None	
d. Septic tanks * -	9,590	7.2
e. Known industrial -	None	
f. Direct precipitation** -	<u>17,040</u>	<u>12.8</u>
Total	133,135	100.0
2. Outputs - Outlet Aqueduct	68,106	
3. Net annual N accumulation -	65,029 kg.	

\*Estimate based on 900 lakeside residences.

\*\*Estimated (see NES Working Paper No. 175).

## C. Mean Annual Nonpoint Nutrient Export by Subdrainage Area:

<u>Tributary</u>	<u>kg P/km<sup>2</sup>/yr</u>	<u>kg N/km<sup>2</sup>/yr</u>
B(1) Cherry Creek	6	289
C(1) Meadow Mountain Run	12	604
D(1) North Glade Run	13	602
E(1) Pawn Run	46	1,904

## D. Yearly Loading Rates:

In the following table, the existing phosphorus loading rates are compared to those proposed by Vollenweider (in press). Essentially, his "dangerous" rate is the rate at which the receiving waters would become eutrophic or remain eutrophic; his "permissible" rate is that which would result in the receiving water remaining oligotrophic or becoming oligotrophic if morphology permitted. A mesotrophic rate would be considered one between "dangerous" and "permissible".

---

<u>Total Yearly Phosphorus Loading Rate (grams/m<sup>2</sup>/year)</u>	
Estimated loading rate for Deep Creek Lake	0.18
Vollenweider's "dangerous" or eutrophic rate	0.53
Vollenweider's "permissible" or oligotrophic rate	0.26

**APPENDIX D**

**CONVERSION FACTORS**

## CONVERSION FACTORS

Hectares x 2.471 = acres

Kilometers x 0.6214 = miles

Meters x 3.281 = feet

Cubic meters x  $8.107 \times 10^{-4}$  = acre/feet

Square kilometers x 0.3861 = square miles

Cubic meters/sec x 35.315 = cubic feet/sec

Centimeters x 0.3937 = inches

Kilograms x 2.205 = pounds

Kilograms/square kilometer x 5.711 = lbs/square mile

**APPENDIX E**

**PARAMETRIC RANKINGS OF LAKES**

**SAMPLED BY NES IN 1973**

**STATE OF MARYLAND**

LAKES RANKED BY INDEX NOS.

RANK	LAKE CODE	LAKE NAME	INDEX NO
1	2402	DEEP CREEK LAKE	550
2	2403	LIBERTY RESERVOIR	268
3	2408	LOCH RAVEN RESERVOIR	215
4	2409	JOHNSON POND	167

LAKE DATA TO BE USED IN RANKINGS

LAKE CODE	LAKE NAME	MEDIAN TOTAL P	MEDIAN INORG N	500- MEAN SEC	MEAN CHLORA	15- MIN DO	MEDIAN DISS ORTHO P
2402	DEEP CREEK LAKE	0.011	0.450	382.167	6.150	14.800	0.005
2403	LIBERTY RESERVOIR	0.018	1.760	401.833	6.325	14.900	0.006
2408	LOCH RAVEN RESERVOIR	0.023	1.440	429.555	7.133	14.800	0.007
2409	JOHNSON POND	0.098	0.950	458.250	26.225	7.200	0.040

## PERCENT OF LAKES WITH HIGHER VALUES (NUMBER OF LAKES WITH HIGHER VALUES)
